

Handles Minimal shine with a diode

Unique new collection of the door fitting **MINIMAL BLACK MATT 20 YEAR LIGHT** from an author's workshop of the Czech manufacturer M & T fittings is moving on not only the design but also the practical possibilities of door handles. The collection Minimal from the serie BLACK MATT has a built-in shining micro diode to make easier to orientate yourselves in dark or night space. The light diode shines continuously and you do not need any batteries or cables. During the day you can hardly see the light but during the night it shines fully and you can see it from a long distance. It does not brighten up and helps you to control your door without switching on the lights. Luminosity is guaranteed for 20 years! The fitting is additionally made with a unique, hand grinded 3D surface finish with an effect of cracked wood. www.doorhandles-mt.cz

Material & Technology s.r.o. – M&T

The first and the only Czech manufacturer of design door handles using modern technology for demanding and high quality surface finishes – nickel matt and titanium nitride in several color shades. It focuses on quality, years of functionality and modern design. New designs are created directly from the company's employees, from the first idea and design to the final production. For customer satisfaction there is a complete collection including window handles, security rosettes, hand grips, hinges, sliding systems, fittings for glass door and other required accessories and components - always a complete assortment in the same design, finish and color. www.doorhandles-mt.cz
